

NPA Graduate Case Studies

Hear from John Brown, one of our graduates that recently undertook the NPA Fundamentals in Computing, as he describes his experience in taking the course.

“The best thing about doing this course was that I was able to do it when I wanted; it was quite straightforward and I could do it at my own speed. The material was pretty good and easy to understand. There were good video tutorials to talk you through some of the aspects of the course. The level of support was good – Nicola was great with support and checking in on me weekly.”

I would recommend this course as it has good content and people will find it interesting, as it is in manageable blocks and not crammed full of content. There are helpful videos and games to play in the course that tries to help make things more understandable.

With my new qualification, I hope to find employment that is flexible that can work around my health issues.”
