

NPA Graduate Case Studies

Hear from Robert Shearer, one of our graduates that recently undertook the NPA Fundamentals in Computing, talking about the new-found skills that he has gained and the flexibility of studying this course.

“The best thing about the NPA course was that the content provides a solid grounding in the technical aspects of IT, i.e., network theory, storage setups, etc; backed up by being heavily based on the Microsoft MTA courses.

The level of support available was excellent, any time I had a question it was answered quickly and courteously, and the weekly check-ins provided a good sense that help was always available.

I would recommend the NPA to anyone requiring an introduction to the functional side of IT as the short length and self-study nature of it means it’s easy to fit into life and work through at your own pace. The fact that the content maps directly to the Microsoft Technology Associate course content is a bonus too.

I am now aiming to find entry-level IT work like support or deployment jobs in order to begin a career in the sector, with a view to gaining further qualifications in time, and I’m particularly interest in opportunities located in Aberdeen or the West of Scotland.”
