

## Digital Skills – Cyber Graduate Case Studies

### AAMIR SALEEM

#### Profile

As Aamir Saleem moves forward, his aim is to continue to build upon his experience, and explore new techniques and technologies, where he can help to fulfil current dynamic market demands.

He has recently completed Level 9 modules in Network and Information Security.

#### Experience of the Course

“This course fitted in perfectly with my career aims, and was also extremely rewarding. The Cyber Modules have raised my awareness of the risks to information security, such as cyber-attacks, and made me more aware about the current threat in daily life and the workplace such as Phishing, spear phishing, malware – viruses, worms and Trojans, ransomware as well as protecting yourself from cyber-attacks.

Some of the fundamental skills I have learnt from this course are security and networking foundations, network defence strategies, cryptography and access management practices, basic computer forensics skills, and an understanding of hacking in cyber and information security.

ScotlandIS staff were excellent, and kept in touch me to ask me if I need any help or support. I look forward to their support in launching my new career path.”
