

Digital Skills – Data

Graduate Case Studies

ADAM HUDZIK

Profile

Adam Hudzik is a detail-oriented, well organised professional, constantly developing his knowledge and skills towards data analytics. He is experienced in project management (medium & large projects) and banking with analytical tasks at large organisations.

Adam is now seeking to use transferable skills within a new environment related to data analysis.

You can view Adam's previous experience in his [LinkedIn profile](#).

Experience of the Course

“I would say that learning new skills and gaining the knowledge of the data analysis / data science field was the best thing about this course. This is what I am interested in very much.

I really enjoyed R programming, where the important part was to think and create a solution of the problem/case. It gave me a personal satisfaction to build a working solution and visualise the data using interactive charts / Shiny App. From the second module (Data Analytics) it's very interesting to find correlations between data by using different methods: linear regression and deep neural networks. It's fascinating.

With my new qualification, I would like to start a job in the data science / data analysis field. I would be more than happy if my new job gave me the opportunity to use and gain my skills and knowledge of R Studio / R programming language and statistical analysis (linear regression, ML, DNN). Developing these skills and knowledge is very important to me.”

- Adam Hudzik
