

Digital Skills – Cyber Graduate Case Studies

KATIE CAMPBELL

Profile

Katie Campbell is a Politics graduate based in Inverness, currently in the final stages of completing a university course in Cybersecurity and Network and Information Security, after previously spending a year working as an English teacher in Japan.

Since taking steps to develop professionally, she is now seeking security roles in the IT sector which reflect these career goals and is keen to gain experience in the Tech Industry and utilise transferable skills gained in previous jobs.

Experience of the Course

“One of the best things about the course were the vast resources available. Les and Stephen's passion and depth of knowledge were definitely inspiring and motivating as well as their approachable personalities which allowed the course content to feel accessible.

The skills I've gained include being able to evaluate and create network and information security policy using current Information Security Standards, expertise in designing secure network structures, network addressing

schemes and security mechanisms. I've had the opportunity to gain experience in designing, implementing and testing a prototype secure network structure and network addressing scheme and evaluate network solutions and security mechanisms. I feel I've gained ability in cybersecurity including threat management and mitigating risks; researching and evaluating current threats and completing an academic report on these risks.

I'm now looking for experience anywhere I can, but I thoroughly enjoyed the Network and Information Security module so I wouldn't mind a job in this area. However, I am open to any new experiences. I am also open to flexible contracts, part-time and full-time roles and willing to commute or relocate for interesting and relevant opportunities.”
