Transport

McGill's

McGill's buses have recently invested £17.5m into all-electric buses, ordering 13 from Falkirk bus building company Alexander Dennis.

McGill's will also install new electrical charging infrastructure for its depots in Johnstone and Dundee. This latest investment brings the total capital put into the firm since 2014 to more than £50m – around £40m of which has been spent on new vehicles, demonstrating the ongoing shift towards electric and hydrogen powered transport.¹
