

NPA in Cyber Security

Graduate Case Studies

ADRIANA CERGHIZAN

Profile

Adriana has a BA in Graphic Design and an MA in Fashion Design. After moving to the UK, she enrolled in a Digital Passport course, which led to undertaking the NPA in Cyber Security.

Experience of the Course

“I thought it would be an interesting course to take in order to expand my skillset, considering how much technology has advanced in the past few decades. My favourite part of the course was completing the Digital Forensics challenges, requiring me to investigate cases where I had to retrieve and collect hidden and deleted data, so that I could gather enough digital evidence in order to solve the case or find out who the suspect was.

New skills I've learned include how to identify security issues, how to protect my data, how to identify those who are trying to steal personal information and the ways they can do that, how to apply a forensic approach to challenges, how to create a security strategy for businesses, as well as different aspects of data security, digital forensics and ethical hacking.

I would like to secure a job that would make use of my new skills as well as my previous abilities, and help me improve myself continuously - ideally I am looking for a company that I could grow together with.”
